Professional Summary

Frontend-focused developer pursuing B.Tech in Computer Science at IIIT Dharwad (CGPA 8.10/10), with hands-on experience building responsive web dashboards, interactive UI pipelines, and real-world web applications through hackathons and research projects. Proficient in HTML5, CSS3, JavaScript, and React, with exposure to backend integration and modern deployment workflows. Eager to contribute to user-centric frontend development in a remote team environment.

Education

B.Tech, Computer Science & Engineering

Indian Institute of Information Technology Dharwad

Aug 2024 – Apr 2026

- CGPA: 8.10 / 10 — Minor: Quantum Information Science — Minor CGPA: 10.0 / 10

Class XII — CBSE Senior Secondary

R.K. International Junior High School, Uttar Pradesh

2024

- Score: 78.6% — Class X (Secondary): 77.2%

Technical Skills

- **Frontend:** HTML5, CSS3, JavaScript (ES6+), React.js, Responsive Design, Bootstrap, Tailwind CSS
- **Backend & Tools:** Python, FastAPI, SQL, Git, GitHub
- **Design & UX:** UI pipeline visualization, component-based design, accessibility, cross-browser compatibility
- **AI & Tooling:** Prompt engineering, Groq API, Llama, RAG systems, LLM integration
- **Documentation:** Technical write-ups, IEEE-format papers, structured reporting

Projects

TruthForge — Enterprise Verification Platform

Web Data UNLOCKED Hackathon (lablab.ai × Bright Data)

May 2026

- Designed and built the complete frontend for three parallel research engines — **SignalForge**, **Greenwash-Guard**, **ClaimWire** — using HTML, CSS, and JavaScript.
- Developed a clean, responsive multi-panel web interface allowing users to submit claims and view real-time verification results across multiple source streams.
- Built dynamic UI components for source triangulation results, confidence scores, and structured insight reports, turning complex backend outputs into scannable, decision-ready views.
- Implemented responsive layout ensuring usability across desktop and mobile devices in a remote-first, hackathon sprint environment.

Telemetry Power Governor — Web Dashboard

VLSI Club Hackathon, IIIT Dharwad — **1st Place**

April 2026

- Rather than displaying hardware telemetry in raw terminal output, designed and implemented a real-time web dashboard to visualise live bitrate and power metrics from the Cora Z-7 FPGA board.
- Built the frontend (HTML/CSS/JavaScript) served via a Python FastAPI backend, rendering live telemetry streams — power states, performance feedback, and bit-rate graphs — as dynamic charts and visual widgets.
- Integrated the web interface with the AXI-Lite firmware bridge over USB, transforming low-level RTL signals into an intuitive, colour-coded UI that replaced raw serial output entirely.
- Delivered a cross-browser compatible, responsive design that made hardware data accessible and interpretable to non-specialist team members and judges.

RAGVault — Offline AI Knowledge System

Aerothon'26, IIIT Dharwad × HAL — **3rd Place**

January 2026

- Designed the standout UI/UX feature of the project: a **visual pipeline interface** showing each stage of the RAG workflow — document ingestion → chunking → embedding → semantic retrieval → response generation — as an interactive, step-by-step flow diagram.

- This creative frontend approach made an otherwise opaque AI backend immediately understandable; the visual pipeline earned specific praise from judges for design innovation and was a key differentiator in the project's recognition.
- Built the complete offline conversational interface using HTML/CSS/JavaScript, supporting multi-format document upload (PDF, DOCX, TXT) and rendering context-aware LLM responses within a privacy-first, zero-internet-dependency architecture.
- Designed for practical use in aerospace and industrial compliance environments; collaborated with teammates Rayyan Shaikh, Arnav Angarkar, and Aakash Pathrikar on system integration.

Research Experience

Quantum Approximate Optimization for Join Order Selection

Jan 2025 – May 2026

IIIT Dharwad — arXiv Preprint in Preparation Endorser: Prof. Ravi Shankar

- Independently designed and executed end-to-end empirical research: problem formulation, benchmark design, results analysis, and IEEE-format write-up.
- Benchmarked QAOA against the classical Selinger DP baseline using the TPC-H industry benchmark; documented findings in structured reports with tables, methodology, and limitations sections.

Achievements & Certifications

-
- **Aerothon'26** (IIIT Dharwad × HAL): 3rd Place — 24-hour AI hackathon; built RAGVault, an offline AI knowledge system praised for its visual pipeline UI.
 - **VLSI Club Hackathon, IIIT Dharwad**: 1st Place — Telemetry Power Governor with real-time web dashboard replacing terminal output.
 - **Meta × Hugging Face Hackathon**: Top 800 of 32,000+ teams (top 2.5%) — Advanced to Round 2; built EnterpriseOps Arena multi-agent RL system.
 - **India Runs Hackathon 2026** (Redrob AI): Candidate Ranking Engine — NDCG@10: 0.928, zero honeypot profiles in top 100.
 - **IBM Quantum Certification**: Basics of Quantum Information — demonstrated self-directed technical learning in a demanding domain.
